Nationality: Jordanian • Date of birth: 15 May 2001 • English (Fluent) • Arabic (Native)

PROFESSIONAL SUMMARY

Data Engineer specializing in data warehousing, dimensional modeling, ETL, and enterprise data platforms. Delivered Jordan's national data warehouse at MoDEE, consolidating data from 30+ government entities into one governed platform, and now builds SAP-sourced warehouses and designs data platform architecture at CogniVerse Intelligence. Microsoft-certified in Azure Data Engineering and Power BI, with hands-on experience across SQL Server, Oracle, SSIS, SAP HANA, and T-SQL.

WORK EXPERIENCE

Data Engineering Specialist, CogniVerse Intelligence

Mar 2026 to Present

Part-time to Jun 2026; full-time since Jul 2026. Data engineering, platform architecture, and enterprise client delivery.

- Designed and built an end-to-end SAP Business One data warehouse for a retail client, replicating ~60 HANA tables into SQL Server and modeling 13 dimensions and 21 fact tables with incremental loading and automated scheduling.
- Built the KPI and business logic layer with 31 DAX measures across sales, cost, margin, customers, returns, and cancellations, including reverse-engineered SAP contract and rebate logic for line-level cost calculation.
- Designed a data quality and reconciliation framework across 13 issue areas, validating warehouse results against SAP and turning findings into a 12-point remediation plan with owners and target dates.
- Lead architecture and product design for an on-premises data warehouse automation product, defining component and API boundaries, Bronze and Silver workflows, incremental-load controls, validation rules, and acceptance criteria.
- Reviewed a customized SAP Business One DMS across purchasing, vehicle sales, and service, documenting 57 findings and 29 recommendations and authoring requirements specifications for both SAP and DMS scopes.

Data Engineer, Ministry of Digital Economy and Entrepreneurship

May 2025 to Jun 2026

MoDEE | National data warehousing, ETL, and governance for Jordan's e-government program.

- Delivered Jordan's national data warehouse in ~4 months, consolidating and cleansing data from 30+ government entities into one governed platform with standardized identifiers and automated data-quality checks.
- Co-designed and built the JIACC anti-corruption data warehouse, enabling cross-entity investigative analytics and discrepancy reporting for senior decision-makers.
- Rebuilt legacy Alteryx workflows as SSIS packages, improving maintainability and reliability across government source systems.
- Wrote and optimized SQL and stored procedures for extraction, transformation, validation, and integration across Oracle and SQL Server.

BI & Data Engineer, Pure Analytica

Sep 2024 to Feb 2025

Clients: Airport International Group (AIG), Cairo Amman Bank, Independent Election Commission, UNDP, GIZ

- Designed and delivered a 13-dashboard diagnostic analytics suite for Airport International Group, separating revenue movements into traffic, gate allocation, seasonality, discount activity, and penetration shifts to explain performance drivers to leadership.
- Built a 360-degree balanced scorecard data mart centralizing financial, commercial, and operational KPIs for senior-management performance tracking.
- Developed ETL pipelines combining multiple source systems into standardized sales and reporting layers across client engagements.

EDUCATION

BSc Software Engineering, Princess Sumaya University for Technology

2019 to 2024

- Equivalent to a Dutch HBO Bachelor's degree (Nuffic diploma comparison). Focus on Python, SQL, machine learning, and Power BI.

CERTIFICATIONS

- **Microsoft Certified: Azure Data Engineer Associate** (Aug 2024). Azure Data Factory, Synapse, Databricks, Data Lake Storage, Stream Analytics, Event Hubs.
- **Microsoft Certified: Power BI Data Analyst Associate** (Nov 2024). Data modeling, DAX analytics, interactive dashboard delivery.

SKILLS

Data Engineering: ETL/ELT, Data Warehousing, Data Modeling, Dimensional Modeling, Incremental Loading, CDC, Data Quality & Governance

BI & Analytics: Power BI, DAX, Dashboard Design, Diagnostic & Descriptive Analytics, Balanced Scorecards

Databases & Platforms: SQL Server, Oracle, SAP HANA, SAP Business One, T-SQL, PL/SQL

Integration & Orchestration: SSIS, Alteryx, SQL Server Agent, Linked Servers

Cloud (Azure): Azure Data Factory, Synapse Analytics, Databricks, Data Lake Storage, Stream Analytics, Event Hubs

Programming: Python, SQL, Object-Oriented Programming

Architecture & Delivery: Solution Architecture, Requirements Engineering, Technical Product Design, Cross-functional Collaboration
